Energy Mix

2013 MIX - ACTUAL

2014 PROJECTED MIX

2013 RENEWABLE MIX - ACTUAL

2014 PROJECTED RENEWABLE MIX

1) Electricity in this program is sold in blocks of 100 kWh (residential) and 500 kWh (commercial). 2) Your purchase of renewable energy certificates (RECs) is supporting electricity production OK and WY. For every unit of renewable electricity generated, an equivalent amount of RECs is produced. The purchase of renewable energy and RECs helps offset conventional electricity generation in the region where the renewable electricity generator is located. The purchase also helps build a market for renewable electricity and may have other local and global environmental benefits such as reducing global climate change and regional air pollution. For more information about RECs, please visit www.green-e.org. 3) Per Green-e Energy requirements, eligible 2013 renewables are generation facilities in operation on or after January 1, 1999. Eligible 2014 renewables are generation facilities in operation on or after January 1, 2000. Green-e Energy also has agreed to certify the renewable energy supply from the Medicine Bow Wind Project, which includes some turbines that began operation in 1998 and 1999. "Other" sources include purchases and power sharing agreements from various resources. These figures reflect the power that we have contracted to provide. Actual 2014 figures may vary based on resource availability. 4) The average home in Longmont Power & Communications' service territory used 744 kWh per month in 2013.

Green-e Energy certifies that LPC's renewable energy meets the minimum environmental and consumer protection standards established by the non-profit Center for Resource Solutions. For more information on Green-e certification requirements, call 1-888-63GREEN or visit www.green-e.org.
